Even a small allocation changes has ability to generate Alpha:

- In Year 2016, adding **20% allocation** to Debt in a 100% Equity portfolio would have given an absolute alpha of **1.6%** at overall portfolio level.
- > Similarly, in Year 2019, adding **10% allocation** to Global funds in a 100% Equity portfolio would have given an absolute alpha of **1.5%** at overall portfolio level.

Asset Classes perform differently in different cycles. Flexibility to underweight or overweight allocation can help in optimizing portfolio returns. Example: Under Balanced profile, Equity allocation can hover in the range of 30-65% of the portfolio.

Fund Manager Selection

To check the importance of fund manager selection, we did a 3 year and 5 year daily rolling return analysis over the period of last 18 years. We have checked the difference in returns between average return of top 3 funds and bottom 3 funds in each categories (Category definition as per SEBI).

> Over the last 3 years (as on Dec 31, 2022), difference between average returns from top 3 and bottom 3 funds from Large cap, Midcap and Small cap funds has been **6%**, **16%** and **19%** respectively.

	Category: Small cap	Category: Mid cap	Category: Large cap
Source: ACEMF	3 Years (CAGR)	3 Years (CAGR)	3 Years (CAGR)
Top 3 Funds	42.6	32.2	15.8
Bottom 3 funds	23.1	15.9	9.7
Difference	19.5	16.3	6.0

➤ Over the long term as well*, the **difference between average return** of top 3 and bottom 3 funds from Large cap, Midcap and Small cap funds has been **9%, 15% and 21%** respectively on 3-year daily rolling return and **9%, 13% and 11%** respectively on 5-year daily rolling return.

Selecting a right fund manager thus plays significant role in delivering Alpha

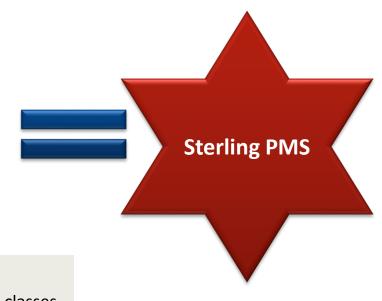

Portfolio Construction Process

Portfolio construction is guided by 2 factors: Model driven guidance and Human driven outlook

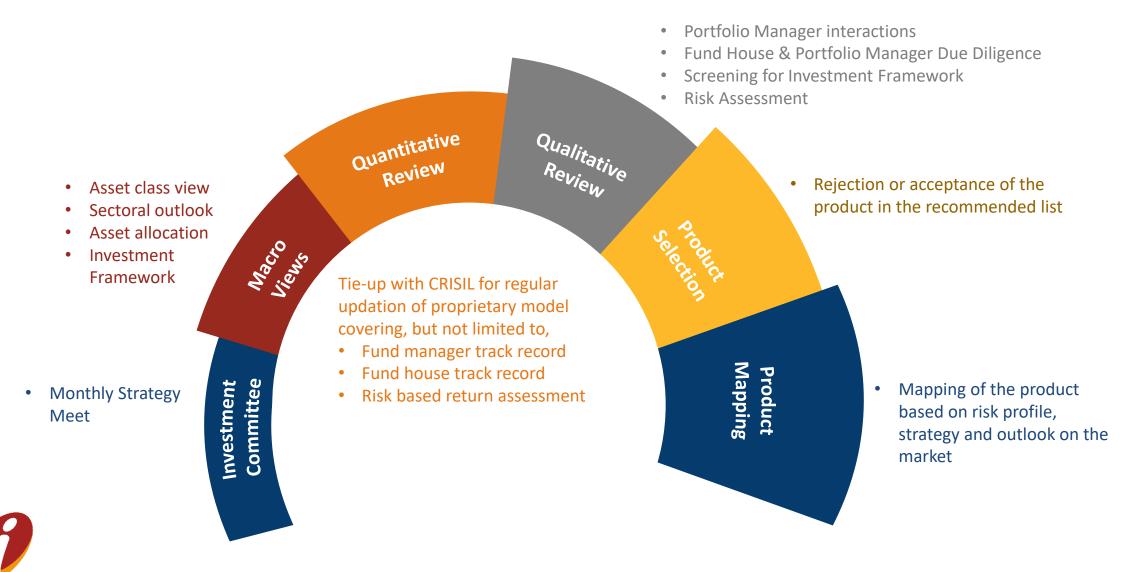

- Asset allocation model: Dynamic model based on valuation metrics suggesting overweight/underweight position based on valuations and probability of equity outperforming debt
- M-cap allocation model: Dynamic model based on valuation metrics for Largecap, Mid & Small cap segment suggesting overweight/underweight position

- Based on the outlook on the market, asset classes and domestic/global environment, strategies are decided, such as,
 - Use of Passive products in large cap space
 - Tactical calls based on sectoral outlook for sectoral exposure
 - Use of Style: Decision to invest in particular style like Value and Contra vs. Growth and Quality

Fixed Income Framework and Philosophy – SLR Framework

Three pronged approach of SLR i.e. **SAFETY – LIQUIDITY - RETURNS** as a central philosophy for fixed income investments

Safety	Liquidity	Returns
 Credit quality is the paramount criteria for debt product selection Our debt product recommendations are driven by a rigorous and analytical selection framework Focus strictly on funds and products having predominantly AAA rated issuers. 	 A criteria that needs to be evaluated not on the basis of expected cash flow requirement, rather on the ease of liquidity of the underlying investments. Apart from bonds, for Debt MFs we monitor the liquid portions of the portfolio (i.e. CBLO, T-bills) for the ability to meet unforeseen redemption pressures. 	 Returns are evaluated basis the risks involved. Hence, Risk-adjusted returns are considered while selecting bonds or mutual funds.

SLR framework drives debt product selection

In terms of our product recommendations, we classify the products into 3 categories – Preservation, Core-Allocation, & Alpha Generation

Our primary focus is preservation for debt products selection, as we strongly believe that debt as an asset class is to be primarily considered for capital preservation and liquidity of the portfolio.

Capital preservation - Shortlisted products.

- Tax Free Bonds
- AAA rated PSU & Private Sector Bonds/NCDs
- Debt Mutual Funds
- Market Lined Debentures (MLDs) with principal protection issued by well known corporates.
